## EVALUATION BOARD HARDWARE

### MOTHERBOARD POWER SUPPLIES

The EVAL-MBnanoDAC-SDZ motherboard supports single and dual power supplies.

The EVAL-AD5320DBZ evaluation board can be powered either from the SDP-B port or externally by the J5 and J6 connectors, as described in Table 1.

Both AGND and DGND inputs are provided on the board. The AGND and DGND planes are connected at one location on the EVAL-MBnanoDAC-SDZ. It is recommended that AGND and DGND not be connected elsewhere in the system to avoid ground loop problems.

All supplies are decoupled to ground with 10  $\mu$ F tantalum and 0.1  $\mu$ F ceramic capacitors.

**Table 1. Power Supply Connectors**

Connector No.	Label	Voltage
J5, Pin 1 (J5-1)	VDD	Analog positive power supply, $V_{DD}$ . Single supply 5 V, dual supply 5 V.
J5, Pin 2 (J5-2)	AGND	Analog ground.
J5, Pin 3 (J5-3)	VSS	Analog negative power supply, $V_{SS}$ , dual supply -5 V.
J6, Pin 1 (J6-1)	VLOGIC	Digital supply from 1.8 V to $V_{DD}$ of the daughter board DAC.
J6, Pin 2 (J6-2)	DGND	Digital ground.

**Table 3. Link Functions**

Link Number	Function
REF1 to REF4	These links select the reference source. Position EXT selects an off-board voltage reference via the appropriate EXT_REF_x connector. Position VDD selects $V_{DD}$ as the reference source. Position 4.096V selects the on-board 4.096 V reference as the reference source. Position 2.5V selects the on-board 2.5 V reference as the reference source. Position 5V selects the on-board 5 V reference as the reference source, $V_{DD} = 5.5$ V.
LK5	This link selects the positive DAC analog voltage source. Position A selects the internal voltage source from the SDP-B board. Position B selects the internal voltage source 3.3 V from the ADP121 on the motherboard. Position C selects an external supply voltage, $V_{DD}$ .
LK6	This link selects the VLOGIC voltage source. Position 3.3V selects the digital voltage source from the SDP-B board, 3.3 V. Position VLOGIC selects an external digital supply voltage, $V_{LOGIC}$ .
LK7	This link selects the negative DAC analog voltage source. Position A selects $V_{SS}$ . Position B selects AGND.

### LINK OPTIONS

A number of link options are incorporated in the EVAL-MBnanoDAC-SDZ and must be set for the required operating conditions before using the board. Table 2 describes the positions of the links to control the evaluation board via the SDP-B board using a PC and external power supplies. The functions of these link options are described in detail in Table 3. The positions listed in Table 2 and Table 3 match the evaluation board imprints (see Figure 10).

## EVALUATION BOARD SOFTWARE QUICK START PROCEDURES

### INSTALLING THE SOFTWARE

The [EVAL-AD5320DBZ](#) evaluation software is compatible with Windows® Vista (64-bit/32-bit), and Windows 7 (64-bit/32-bit).

The software must be installed before connecting the [SDP-B](#) board to the USB port of the PC to ensure that the [SDP-B](#) board is recognized when it connects to the PC.

To install the software, take the following steps:

1. Start the Windows operating system. Download the installation software from the [EVAL-AD5320DBZ](#) evaluation board page.
2. Run the setup.exe file from the installer folder if it does not open automatically.
3. After installation is complete, power up the evaluation board as described in the Motherboard Power Supplies section.
4. Connect the evaluation board to the [SDP-B](#) board and the [SDP-B](#) board to the PC using the USB cable included in the evaluation kit.
5. When the software detects the evaluation board, click through any dialog boxes that appear to finalize the installation.

### RUNNING THE SOFTWARE

To run the program, take the following steps:

1. Connect the evaluation board to the [SDP-B](#) board and connect one end of the USB cable to the [SDP-B](#) board, and connect the other end of the cable to the PC.
2. Power up the evaluation board as described in the Motherboard Power Supplies section.
3. From the **Start** menu, click **All Programs, Analog Devices, AD5320 Evaluation Software**.
4. If the [SDP-B](#) board is not connected to the USB port when the software is launched, a connectivity error displays (see Figure 2). Connect the evaluation board to the USB port of the PC and wait a few seconds. When the [SDP-B](#) board is detected, the display is updated (see Figure 3).

Alternatively, the software can be used without an evaluation board. The software runs in simulation mode, displaying expected outputs based on the input data. The main window of the [AD5320](#) evaluation software then opens, as shown in Figure 4.

**SOFTWARE OPERATION**

The software for the AD5320 allows the user to program values to the DAC register of the DAC.

**Write to DAC Register**

Click **Write to DAC Register** to load the code of the input data control to the DAC register of the DAC.

**Power-Down Control**

On the **POWER-DOWN LOGIC** block, click the blue progressive disclosure option to select the power-down setting for the DAC. The associated selection box allows the device to operate in normal mode or three different power-down modes. Click the relevant radio option as shown in Figure 5. When the power-down setting for the DAC is selected, click **OK** to write the appropriate values to the AD5320.
